

8.4	The Projective View of Curves	129
8.5	Homogeneous Coordinates	134
8.6	Bézout's Theorem Revisited	137
8.7	Pascal's Theorem	139
8.8	Biographical Notes: Desargues and Pascal	142
9	Calculus	146
9.1	What Is Calculus?	146
9.2	Early Results on Areas and Volumes	148
9.3	Maxima, Minima, and Tangents	150
9.4	The <i>Arithmetica Infinitorum</i> of Wallis	152
9.5	Newton's Calculus of Series	155
9.6	The Calculus of Leibniz	159
9.7	Biographical Notes: Wallis, Newton, and Leibniz	160
10	Infinite Series	170
10.1	Early Results	170
10.2	Power Series	173
10.3	An Interpolation on Interpolation	176
10.4	Summation of Series	177
10.5	Fractional Power Series	179
10.6	Generating Functions	181
10.7	The Zeta Function	184
10.8	Biographical Notes: Gregory and Euler	186
11	The Number Theory Revival	192
11.1	Between Diophantus and Fermat	192
11.2	Fermat's Little Theorem	196
11.3	Fermat's Last Theorem	198
11.4	Rational Right-angled Triangles	200
11.5	Rational Points on Cubics of Genus 0	204
11.6	Rational Points on Cubics of Genus 1	207
11.7	Biographical Notes: Fermat	211
12	Elliptic Functions	213
12.1	Elliptic and Circular Functions	213
12.2	Parameterization of Cubic Curves	214
12.3	Elliptic Integrals	215
12.4	Doubling the Arc of the Lemniscate	217

12.5	General Addition Theorems	220
12.6	Elliptic Functions	222
12.7	A Postscript on the Lemniscate	224
12.8	Biographical Notes: Abel and Jacobi	224
13	Mechanics	231
13.1	Mechanics before Calculus	231
13.2	Celestial Mechanics	234
13.3	Mechanical Curves	236
13.4	The Vibrating String	241
13.5	Hydrodynamics	245
13.6	Biographical Notes: The Bernoullis	248
14	Complex Numbers in Algebra	256
14.1	Impossible Numbers	256
14.2	Quadratic Equations	257
14.3	Cubic Equations	257
14.4	Wallis' Attempt at Geometric Interpretation	260
14.5	Angle Division	262
14.6	The Fundamental Theorem of Algebra	266
14.7	The Proofs of d'Alembert and Gauss	268
14.8	Biographical Notes: d'Alembert	272
15	Complex Numbers and Curves	276
15.1	Roots and Intersections	276
15.2	The Complex Projective Line	279
15.3	Branch Points	282
15.4	Topology of Complex Projective Curves	285
15.5	Biographical Notes: Riemann	288
16	Complex Numbers and Functions	293
16.1	Complex Functions	293
16.2	Conformal Mapping	297
16.3	Cauchy's Theorem	299
16.4	Double Periodicity of Elliptic Functions	302
16.5	Elliptic Curves	305
16.6	Uniformization	309
16.7	Biographical Notes: Lagrange and Cauchy	310

17 Differential Geometry	315
17.1 Transcendental Curves	315
17.2 Curvature of Plane Curves	319
17.3 Curvature of Surfaces	322
17.4 Surfaces of Constant Curvature	324
17.5 Geodesics	326
17.6 The Gauss–Bonnet Theorem	327
17.7 Biographical Notes: Harriot and Gauss	331
18 Noneuclidean Geometry	338
18.1 The Parallel Axiom	338
18.2 Spherical Geometry	341
18.3 Geometry of Bolyai and Lobachevsky	343
18.4 Beltrami’s Projective Model	344
18.5 Beltrami’s Conformal Models	348
18.6 The Complex Interpretations	352
18.7 Biographical Notes: Bolyai and Lobachevsky	357
19 Group Theory	361
19.1 The Group Concept	361
19.2 Permutations and Theory of Equations	364
19.3 Permutation Groups	367
19.4 Polyhedral Groups	368
19.5 Groups and Geometries	371
19.6 Combinatorial Group Theory	373
19.7 Biographical Notes: Galois	377
20 Hypercomplex Numbers	382
20.1 Complex Numbers in Hindsight	382
20.2 The Arithmetic of Pairs	383
20.3 Properties of $+$ and \times	385
20.4 Arithmetic of Triples and Quadruples	387
20.5 Quaternions, Geometry, and Physics	391
20.6 Octonions	393
20.7 Why \mathbb{C} , \mathbb{H} , and \mathbb{O} Are Special	396
20.8 Biographical Notes: Hamilton	399

21 Algebraic Number Theory	404
21.1 Algebraic Numbers	404
21.2 Gaussian Integers	406
21.3 Algebraic Integers	409
21.4 Ideals	412
21.5 Ideal Factorization	416
21.6 Sums of Squares Revisited	418
21.7 Rings and Fields	422
21.8 Biographical Notes: Dedekind, Hilbert, and Noether . . .	424
22 Topology	431
22.1 Geometry and Topology	431
22.2 Polyhedron Formulas of Descartes and Euler	432
22.3 The Classification of Surfaces	434
22.4 Descartes and Gauss–Bonnet	438
22.5 Euler Characteristic and Curvature	440
22.6 Surfaces and Planes	443
22.7 The Fundamental Group	448
22.8 Biographical Notes: Poincaré	450
23 Sets, Logic, and Computation	454
23.1 An Explanation	454
23.2 Sets	455
23.3 Measure	459
23.4 Axiom of Choice and Large Cardinals	462
23.5 The Diagonal Argument	464
23.6 Computability	466
23.7 Logic and Gödel’s Theorem	469
23.8 Provability and Truth	473
23.9 Biographical Notes: Gödel	475
Bibliography	479
Index	514
